Kanton Basel-Stadt

CONNECTION OF THE CANTON OF BASEL-STADT TO EASYGOV

CONNECTION OF THE CANTON OF BASEL-STADT TO EASYGOV

The canton of Basel-Stadt is further expanding its digital offering with the support of adesso: From now, companies can apply for and manage permits for cross-border commuters via the EasyGov application, which is available nationwide.

CHALLENGE

Companies in Switzerland must reapply for work permits for employees from an EU/EFTA country or renew them at regular intervals.

To date, individual cantonal processes must be followed, which results in a high level of bureaucracy and negative impact on working hours and personnel costs from a company's perspective.

SOLUTION

The connection of the Canton of Basel-Stadt to the EasyGov portal, supported by adesso, means that companies have a choice and can continue to enter and manage permit applications either via cantonal or nationwide EasyGov.

There are virtually no changes for the administration, as applications from both platforms are processed in the same specialist system in the same way.

BENEFITS

EasyGov makes it possible for companies with locations in several cantons in particular to fulfill their administrative tasks more easily and better. A better overview and less work are the biggest advantages.

Cantons can connect to and use the new service from the State Secretariat for Economic Affairs SECO without having to reinvent the wheel or pay for it.

MORE ON THE SOLUTION

In the canton of Basel-Stadt, a central interface was developed that is able to process data packages from EasyGov in sedex format and exchange them with internal specialist applications.

The communication protocol supports the various process steps, such as the application or approval of an application. It is also possible to request or submit additional information and withdraw an application.

adesso contributed to the success of this project in the canton of Basel-Stadt in the areas of project management according to Hermes, business process and requirements analysis as well as coordination of the development work.

METHODS AND APPLIED TECHNOLOGIES

Project coordination and documentation was carried out with the help of Atlassian Jira and Confluence. The BPMN methodology was used during the process analysis. It was developed via a cantonal eGoverment implementation, which included the establishment of a sedex adapter and a specially developed interface for data exchange as well as the expansion of a specialist application. A modular concept was used to test the software.

ABOUT THE CUSTOMER

Kanton Basel-Stadt

Basel-Stadt is a canton in Switzerland. Its capital and most populous urban area is the city of Basel. The canton is part of the economic region of north-western Switzerland. Its geographical location between the Vosges, Black Forest and Jura mountains and the many hours of sunshine increasingly attract residents and companies to Basel.
